

NOTINO - Assignment

Your assignment is to create application for displaying few Notino products as seen on example screenshot below.

- Create **native Android** application in **Android Studio** (Android Studio 4.0 or higher).
- Use Figma for designing. All design resources are inside design-android.fig file.
- Get products from simple get request located at url <https://my-json-server.typicode.com/cernfr1993/notino-assignment/db>
- Use prefix url for downloading product images https://i.notino.com/detail_zoom/
- Clicking on heart button changes its empty heart to filled heart and vice versa.
- State of the favourite products (state of the heart) must be stored persistently.
- Keep in mind that products count can be much higher than provided in example request.
- Use score property in reviewSummary for displaying product rating.
